John Baker Five Houses
3768-76 St. Paul Street
Ellicott City
Private

Facing south on the north side of St. Paul Street, this row of clapboarded frame houses with stone foundations is made of three separate buildings, each at a slightly different elevation.

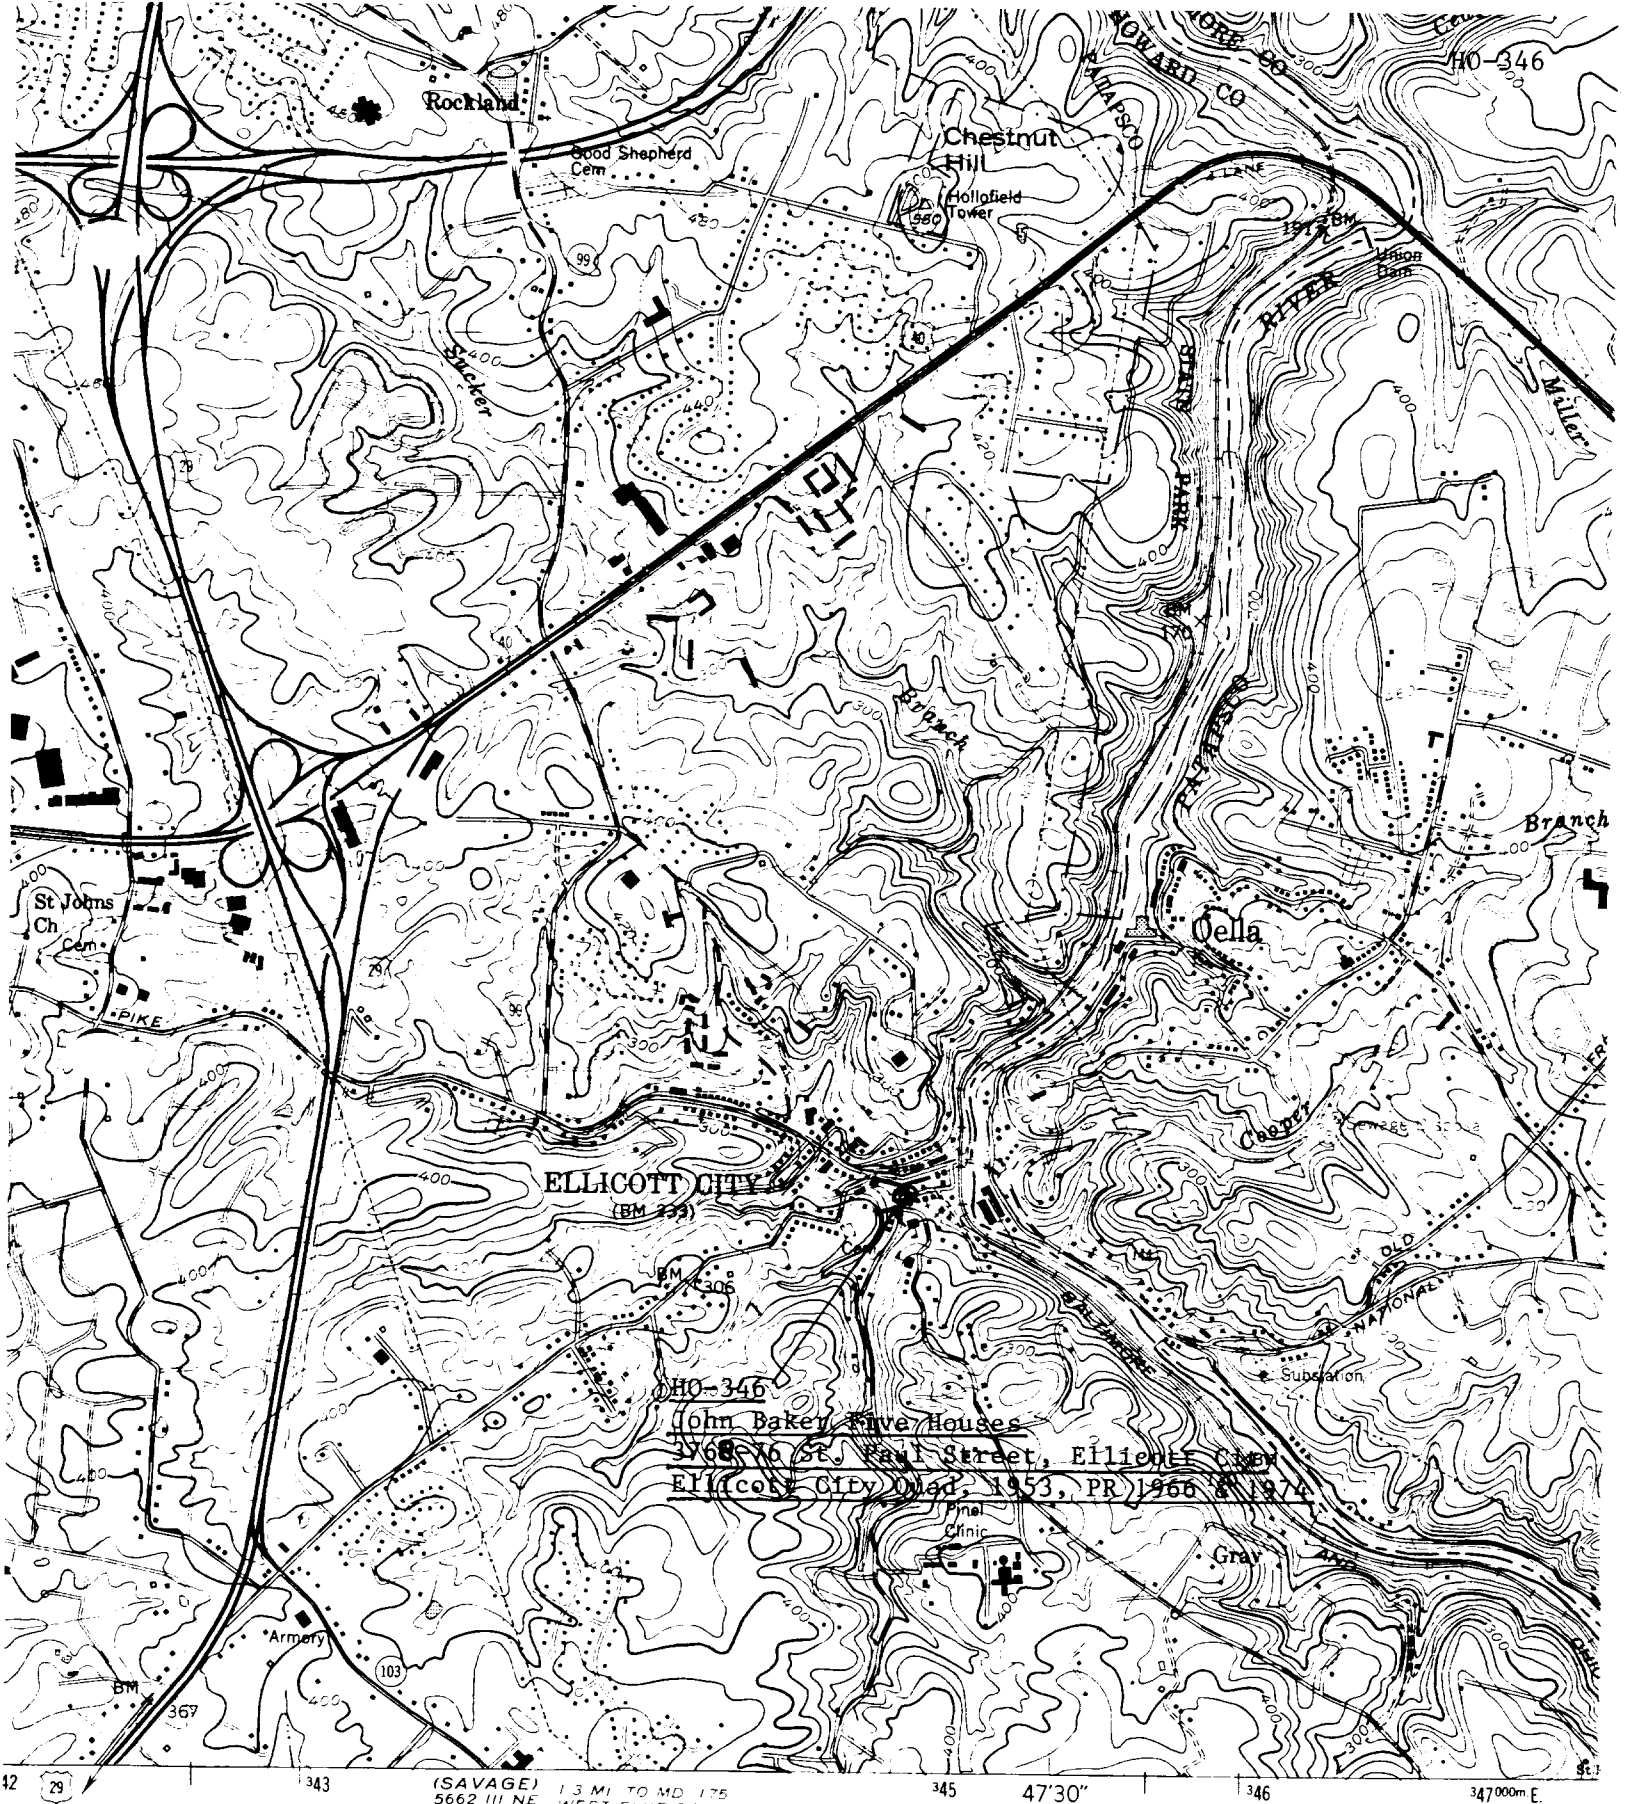

3776 St. Paul Street is the highest point, and farthest to the west. This two-bay, two story frame house has a 4-light door in the west bay of the first floor, and 6/6 windows elsewhere. There is an interior brick chimney on the west gable end of the house. There are two small 6/6 sash windows in the attic gable of the west facade, which has cornice returns. An enclosed rear shed-roofed porch addition extends west of the building, and a door opens to the south of the projection.

The central block, slightly lower, is a duplex, with a shared brick chimney between. Four bays wide and two stories high, the two entrances to this building are in the center two bays. The windows were once 6/6, but have been replaced with 2/2 sash. Each door has two lights in it.

The third, easternmost building, including 3768 St. Paul Street in the eastern half, is also a duplex, sharing a central chimney, and is also lower than the central building. Also a two story, four bay wide frame building, it looks much the same as its western neighbor, but all the sash remain 6/6. The east gable end of this building has one 6/6 sash window in the attic.
